89%

PROJECTS

Department Management System
Developed a full-stack Department Management System using Spring Boot, React, and MySQL to streamline departmental operations. Built secure RESTful APIs with Spring Boot and Spring Security using JWT authentication for role-based access control. Designed a responsive frontend with React for managing employees, projects, and inventory with real-time data updates.

ACHIEVEMENTS & AWARDS

Won RGU CODE OPS Hackathon for building a complete University Management System solo using React, Spring Boot, and MySQL. Architected and delivered features including attendance analytics dashboard, bulk student import via CSV/Excel, document management, and data export functionality, handling everything from database design to frontend UI.
